

WHAT IS CLAIMED IS:

1. An apparatus for holding medicaments for heating in proximity to the skin of a living body or for holding other therapy delivery plugs in such proximity to skin locations, comprising:

a strap member for surrounding a body member of said living body to hold a portion of said apparatus in substantially immovable location relative to said body member,

a housing shaped to contain a channel for holding a delivery plug of a shape mated to fit within said channel in a fixed location within said channel.

2. An apparatus as set forth in claim 1 wherein said housing comprises an electrically conductive heater member connected with said channel and an electric circuit connected to said electrically conductive heater member to deliver electrical energy to said heater member.

3. An apparatus as set forth in claim 2 further comprising a switch connected to said electrical circuit to enable a user operating said switch to start or stop the delivery of said electrical energy to said electrically conductive heater member.

4. An apparatus as set forth in claim 3 wherein said switch has variable power settings to enable a user to adjust the heat level provided by the delivery of electrical energy to said electrically conductive heater member.

5. An apparatus as set forth in claim 2 wherein said medicament delivery plug is situate-able within said channel and said heater member is connected

with said channel in a manner to transfer heat to said medicament delivery device when said delivery device is situated within said channel.

6. An apparatus as set forth in claim 1 wherein said housing has a clamping mechanism for securing a medicament delivery device in an adjustable fixed location within said channel.

7. An apparatus as set forth in claim 1 wherein said housing has an opening for a clamping means to secure a medicament delivery device in an adjustable fixed location within said channel.

8. An apparatus as set forth in claim 1 wherein said channel is comprised of a group of materials of the set: metal, ceramic or stone.

9. A medicament delivery device plug adapted to contain moxa or other medicament and to fit fixedly within the channel of an apparatus as set forth in claim 1.

10. A medicament delivery device plug adapted to fit within said housing of an apparatus as set forth in claim 1 wherein said medicament delivery device is adapted to be moveable within said housing.

11. A surface application device plug adapted for fitting within said channel of said housing of the apparatus as set forth in claim 1, wherein said surface application device plug has a treatment end adapted to be held substantially against the surface of a living body, said treatment end comprising a treatment composition predetermined to deliver either tonification or sedation, said treatment composition being drawn from the set of treatment compositions

comprising, gold colored metal, silver colored metal, and magnetic field supplying means of a specified polarity.

12. A medicament delivery device for holding moxa or other heatable medicaments against a surface of a living body and for use within a channel of an apparatus for holding said medicament delivery devices in a fixed location above said living body surface, said delivery device comprising:

a head end and a delivery end, said head end for fixable locking into said channel and both ends having a passage area therein for the storage and heating of said medicament, and said delivery end having an opening for transmission of heated medicament therethrough.

13. A medicament delivery device as set forth in claim 12 wherein said delivery device passage area contains a passageway for holding a preformed load of medicament.

14. A preformed load of medicament shaped to fit within a passageway of a medicament delivery device of claim 13.

15. A medicament deliver device as set forth in claim 12 wherein said delivery end has a surface comprising a silver or gold colored metal.

16. A medicament deliver device as set forth in claim 12 wherein said delivery end has a pointy surface for contact with a living body.

17. A medicament deliver device having an external shape adapted for use within a channel of an apparatus for holding a set of medicament delivery

devices or substitute devices in a fixed location above a living body surface said substitute device comprising:

a head end, and a body end for fitting into a channel of said apparatus for holding, and

a delivery end for providing tonifying or sedating pressure to the surface of a living body when said delivery end is held against said living body by said apparatus for holding.

18. A delivery structure for delivering a heated medicament or tonifying or sedating force to specific points on the surface of a living body for a sustained period of time comprising:

a channel containing room for holding a tonifying or sedating or medicament delivery device,

a fixture for holding said channel in a fixed location against said body,
at least one plug taken from a set of tonifying, sedating or medicament delivery devices selectable by a user for being held within said channel.

19. A delivery structure as set forth in claim 18 wherein said channel comprises a heater element.

20. A delivery structure as set forth in claim 18 wherein said at least one plug comprises a pair of contacts for connection to electrical contacts on said channel.

21. A delivery structure as set forth in claim 18 wherein at least one plug comprises a resistive heater for connection to electrical contacts on said channel.
